

Een Chinese papieren ster

v12656

Een Chinese ster gemaakt van vlechtstroken van Vivi Gade Design Papier (Oslo-serie) en opgehangen aan een stuk natuurlijk hennep draad.

Hoe werkt het

1. Use a weaving paper strip. Make a knot in one end, leaving a small piece of paper strip to hold on to.

2. Squeeze the knot flat. It is now an equilateral pentagon.

3. Twist the long paper strip around the pentagon. Pull at the paper at the same time and let the paper strip follow the edges.

4. Push the small end underneath so it gets covered by the paper strip.

5. Fold the strip around until only a small piece is left.

6. Fold and carefully insert the end into the pentagon. In this way the pentagon is stuck together without glue.

7. Push in each of the pentagon's five sides with a thumb fingernail. This results in the pentagon bulging in the middle.

8. It is now a small three-dimensional star.
