

Geverfde houten haken met screen stencil afdrukken

v14589

Deze houten haken in verschillende afmetingen zijn geverfd met Plus Color Acrylverf, op één na, die een natuurlijke afwerking heeft gekregen. Een screenstencil en Plus Color Acrylverf is gebruikt om de knoppen te decoreren.

Hoe werkt het

1 Apply one or two coats of Plus Color craft paint to the hook in one colour and leave to dry between each application. Place a stencil sheet on top of the hook. Saturate the foam stencil brush with the same type of paint in a different colour and carefully dab the desired design onto the hook. A TIP: You may want to test on a piece of paper first.

2 Another variant: Make a print on an untreated hook using the technique described above. You may prime the hook beforehand with diluted paint which is then wiped dry with a cloth. The wood grain will still be visible whilst the wooden hook has a hint of colour.
