

Kerstster gevlochten van faux leather paper vlechtstroken

v14983

Deze kerstster is gevlochten van vlechtstroken gemaakt van faux leather papier (leerpapier). De ster is opgehangen aan een stuk leerkoord gedecoreerd met houten kralen.

Hoe werkt het

1 Weave the paper star strips using the step-by-step instructions on the packaging. Don't tighten too much at step 3 as the thick paper otherwise makes the weaving difficult.

2 It can be quite difficult to pull the strips through the woven paper strips. Make a loop with a pencil to ease the process.

3 Make a hole in the finished woven star using a fine hole punch or a darning needle.

4 Thread a leather cord through the hole and thread on wooden beads. Tie the two ends together to make a knot.
