Adventskrans met DIY kaarsenhouders en Faux Leather Papier decoraties

v15445

Maak zelf een adventskrans van een metalen ring gedecoreerd met groen, bessen en bladeren gemaakt van Faux Leather Papier. Maak zelf kaarsenhouders door bonsaidraad te wikkelen rond LED kaarsen. Een decoratie geponst uit Faux Leather Papier is onder de krans gehangen voor extra decoratie.

Hoe werkt het

1 Cut four 50 cm pieces of bonsai wire and wrap each piece around the base of an LED taper candle. If you prefer to use wax taper candles, then wrap the bonsai wire around a metal candle holder.

2 Place each of the four LED candles with the candle holders into the metal ring so that each candle is in a corner. Glue them in place with a glue gun ensuring they are straight. Tie four 85 cm pieces of leather cord onto the metal ring for hanging. Gather the cords with a knot at the top.

3 Cut 8-10 gold faux leather paper leaves; 7 cm long and max. 2 cm wide. Punch out two “Merry Christmas” decorations from gold faux leather paper – one with the gold side facing up and the other with the brown side facing up. Glue the two punched-out decorations together (brown side against brown side), so that the gold faux leather paper is facing outward.

4 Fill the inside of the metal ring with greenery. In this picture we have used delicate pine. Glue gold artificial berries and gold faux leather paper leaves amongst the greenery. Hang the “Merry Christmas” punched-out decoration underneath the Advent wreath with a thin gold thread.
