Metalen ring met bellen en Vivi Gade kerstdecoraties

v15418

Deze kerstdecoratie is gemaakt van een metalen ring gedecoreerd met bellen, en verschillende Vivi Gade decoraties en geponste sneeuwvlokken.

Hoe werkt het

1 Place the metal ring on a piece of paper and draw a wavy outline on both sides of the ring, following the curve of the ring. The outline should be approx. 2.5-3 cm wide and max. 15 cm long.

2 Double over the paper and cut out two identical pieces. Glue the pieces around the metal ring as illustrated in the picture.

3 Punch out snowflakes in different sizes from paper in different colours and glue them onto the paper already attached onto the metal ring. Create a 3D effect by only attaching the centre of the snowflakes to the paper and then bend the tips slightly upward. You may attach several snowflakes on top of each other.

4 Attach the card cut-outs between the snowflakes using a glue stick or glue them directly onto the metal ring.

5 Tie a piece of gold thread with a bow at the top of the metal ring for hanging. Tie either bells onto the ends of the thread or glue large card cut-outs onto the thread.
