

Gedecoreerde hoeden dozen

v11684

Handgemaakt papier is gelijmd op vierkante hoedendozen met VTR lijm.

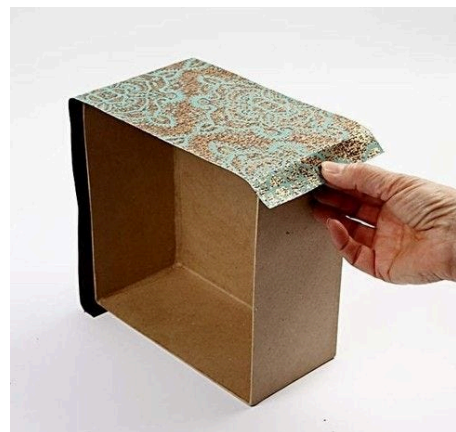

Hoe werkt het

1 Measure the height of the box + 2cm in each side. The best result is achieved when finishing at a corner. The first piece of paper extends 2cm around the corner.

2 Apply a thin layer of glue onto the box to prevent it sucking the glue from the paper. Also apply glue to the paper.

3 Put on the paper and smooth out air bubbles.

4 Cut a notch in each corner and fold down the flaps. Remember to glue.

5 Glue on the next piece of paper exactly from one corner to the next. Always cut it a bit smaller, as the glue makes the paper expand

6 Measure the base, cut (slightly smaller) and glue on.

7 For the lid, cut away paper for the corner as shown.

8 Fold down the flaps and glue in the order as shown.

9 At the intersections on the largest boxes, the best result is achieved when you manage to get the pattern to fit. The edges abut or overlap 1cm.
