Hangende muizetrapjes
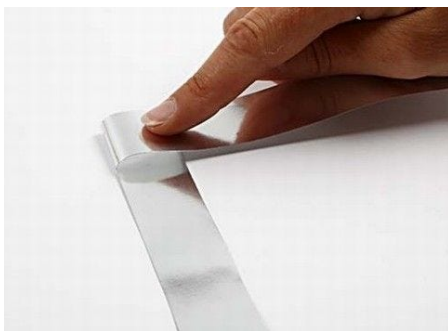

v12039

Het klassieke muizetrapje krijgt een elegante twist met parelmoerkleurige plastic kralen, een zilveren tassel en witte veren.
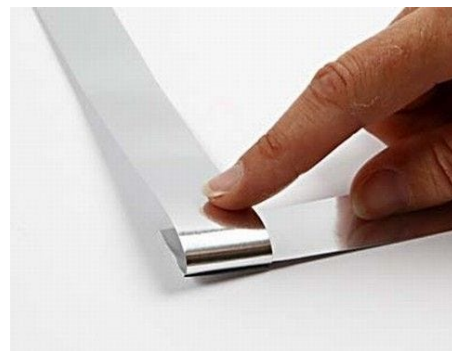

Hoe werkt het

1 Divide an 84cm long weaving paper strip in two and glue these two parts together using Clear Marker as shown in the photo.

2 Make a concertina from the entire length of the paper strips.

3 -

4 Make a small tassel from the silver thread. Twist the thread ten times around four fingers.
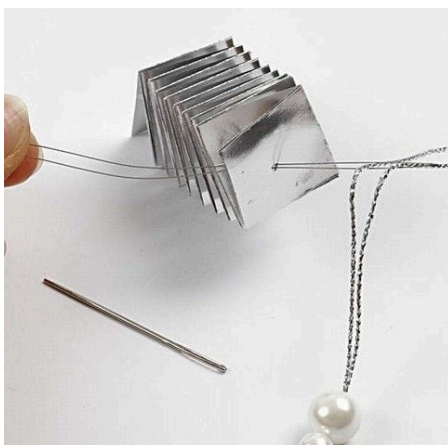

5 Gather the tassel with an approx. 20cm long piece of silver thread. Tie a double knot.

6 Pull a flat wavy mother-of-pearl plastic bead down over the top of the tassel.

7 Pull a small and a large plastic bead onto the thread using a beading needle.

8 Make a hole at the bottom of the concertina and with a beading needle and feed the thread through the hole.

9 Tie a knot.

**10** Close the layers with Glue Spots.

11 Cut open the loops of the tassel.

12 Push the feather up into the wavy bead. You may apply a small blob of Clear Marker onto the end of the feather beforehand.

14 Insert a beading needle threaded with silver thread through the hole and pull on a bead. Finish with a knot.

13 Make a hole at the top of the concertina using a needle.
