

Sieraden School. Afwerken met eindkappen

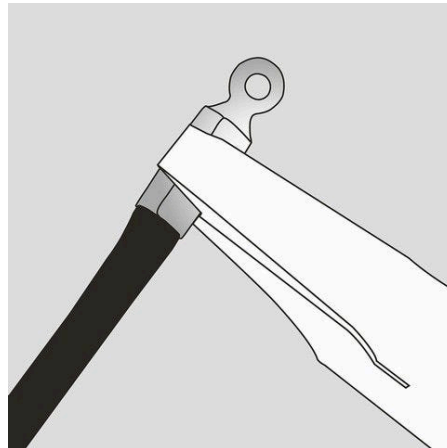

v12366

Er zijn veel verschillende eindkappen: sommigen zijn plat, anderen zijn rond. Ze kunnen verschillende configuraties hebben, en de diameter van het gat kan variëren. Gemeenschappelijk voor alle eindkappen is dat ze een ring of een lus aan de ene kant hebben om bijvoorbeeld een slotje aan te bevestigen.

Hoe werkt het

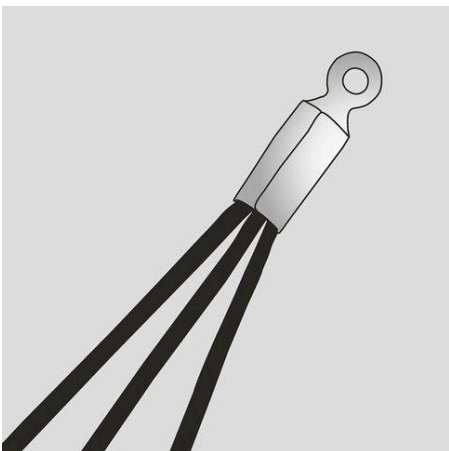

1. Fold-over Cord Ends: Place the cord (3mm) inside the fold-over cord end. Squeeze the sides one at the time.

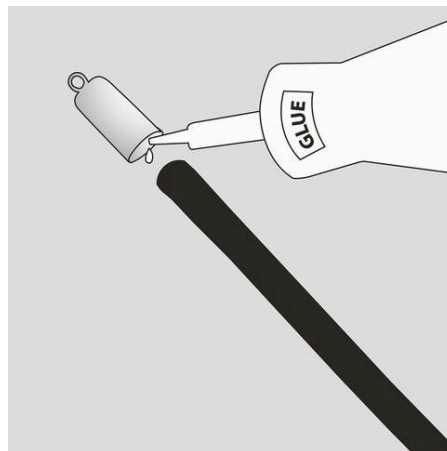

2. Squeeze using flat nose pliers.

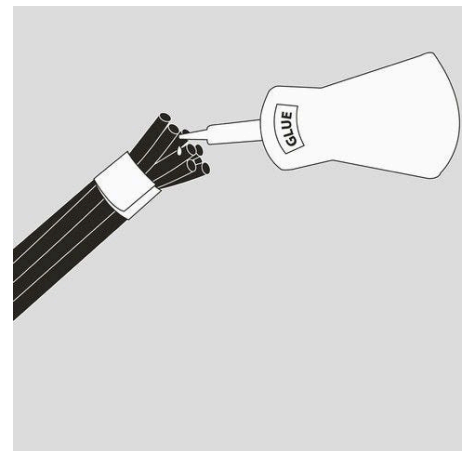

3. Attach a clasp to the loop on the fold-over cord end with a round jump ring.

4. A variant: May be used for several thin cords (2mm).

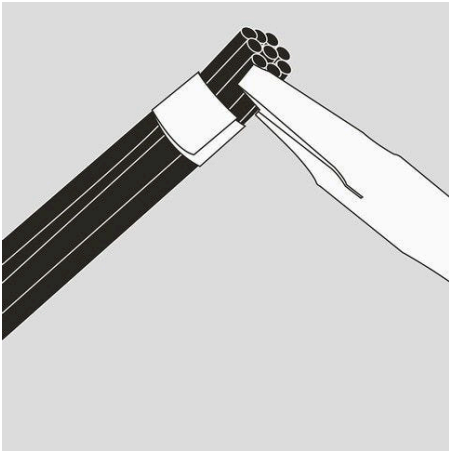

5. End Cap (2mm): Apply a small blob of Super Attak Instant Glue into the end cap. Insert the cord (2mm) into the end cap and glue.

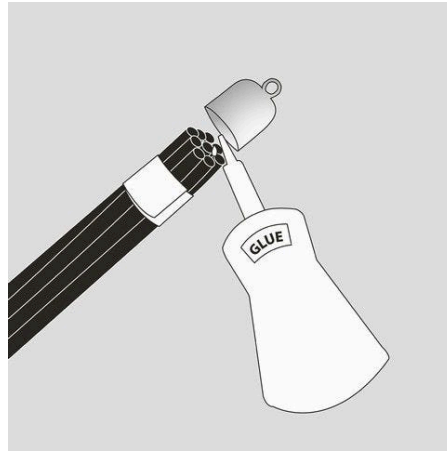

6. End Cap (6mm): Gather several cords with masking tape. Glue the cords together.

7. Squeeze the cord ends with flat nose pliers so that they fit into the end cap before the glue has dried.

8. Apply a small amount of glue into the end cap. Insert the bunch of cord ends into the end cap and glue.
