

Ganzeneieren met een gatenpatroon

v13543

Elk ganzenei is gedecoreerd met een delicat filigraan patroon. Het patroon is gemaakt met een graveerapparaat voor glas. Organza lint is gebruikt voor het maken van de ophanglus.

Hoe werkt het

1. NB. In comparison to other natural eggs, goose eggs are distinguished by their thick shell. Therefore, drilling through the shell is possible without the egg breaking. Use the small ball tip of the engraving tool and make holes in the egg, creating a pattern, using your imagination.

2. Revisit each hole again using a cylinder drill. Drill along the edges to make the holes larger.

3. If you want even larger holes, use the pink ball tip of the engraving tool at the end.

4. Tie a piece of organza ribbon to a shortened stick (for instance a match). Carefully insert the stick through the hole and arrange it transversely for hanging.

5. NB. You may drill a single hole at the top. Make this large enough for filling the egg with water, using it as a vase for snowdrops.

Another variant Instead of attaching a ribbon for hanging, you may place the eggs on a tray.
