

Een spandoek van imitatiestof

v13433

Dit spandoek is gemaakt van witte imitatiestof. De zijkanten zijn vastgemaakt rond bloemstokken. Het spandoek is gedecoreerd met A-Color acrylverf.

Hoe werkt het

1. Bend each side to fit around a flower stick before decorating the banner with A-Color acrylic paint. Use a stapler for stapling the fabric vertically with staples every 3-5cm, creating a "casing" for the flower stick. Also staple together the opening at the top.

2. You may sew the casing and the opening together using a sewing machine.

3. Push a flower stick inside the casing at each side of the banner. Now you can paint and decorate the imitation fabric. The advantage of imitation fabric is that it can be painted with several types of paint. Please remember to put a protective underlay underneath to prevent paint smudging onto the table.

A TIP When making long banners, cut small holes to counteract wind pressure. When hanging the banners, make the casing horizontally on the banner and feed the rope for hanging whilst making the casing.
