

Geweven mand rond houten bodem en bloemstokken

v13653

Deze mand, geweven van zeegras in twee kleuren, is gemaakt om een houten bodem met voorgeboorde gaten en bloemstokken.

Hoe werkt het

1. Shorten the flower sticks at a desired length. Use a mitre cutter. Then use the hammer to hammer a flower stick into each of the pre-drilled holes on the wooden disc which forms the base.

2. Attach the sea grass cord onto the base and the inside of a random flower stick using a blob of glue deposited with a glue gun. Now weave in and out of each flower stick.

3. If you wish to change the colour, cut the sea grass cord when finishing a round and attach a new cord at the end of the previous one with a blob of glue. Use a glue gun.

4. NB: Along the way, gently tap with a hammer on the sea grass cord between each flower stick for a tight weaving.

5. Finish the basket with a plaited water lily cord. This cord is flat and therefore easy to place and attach with glue along the edge.
