

Tropische vogel van styropor en Silk Clay

v14750

Deze vogel is gemaakt van twee styropor ballen van verschillende grootte en aan elkaar gezet met alu draad. Silk Clay is gebruikt om de vogel vorm en kleur te geven. De details op de vleugels zijn aangebracht met Silk Clay Creamy.

Hoe werkt het

1 Make a skeleton for the bird using a large polystyrene egg for the body and a small polystyrene egg for the head. Assemble the two with bonsai wire for the neck and use bonsai wire for the legs and feet.

2 Cover the head, neck and body with Silk Clay. Use Silk Clay for the feet. Add three white Silk Clay stripes onto each foot and roll them flat.

3 Model a beak, head feathers, eyes and wings according to your imagination and press these onto the bird. Decorate the wings with Silk Clay Creamy at the end. This can be applied directly from the piping bag and nozzle which is supplied with the modelling clay.
