

## Kerstbal van papieren cirkels

v14991

Deze kerstbal is gemaakt van 12 cirkels van Vivi Gade Design papier. Gebruik om de bal op te hangen een stuk katoenkoord gedecoreerd met een kraal.

### *hoe werkt het*

**1** Cut circles from design paper using a template. You may want to use a circle cutter if you want to make a lot of baubles. For each bauble you will need 12 circles measuring 6.5 cm in diameter

**2** Fold the 12 circles in half with the same side facing outwards.

**3** You may make a template from the circle, dividing one half of the circle in three. Attach power tape to the bottom and top 1/3 of the circle. Do the same on all of the circles; i.e. on the right on the dotted side and on the left on the side with the spruce motif.

**4** Now assemble the parts. It's easier to assemble the dotted sides first.

**5** Now assemble the sides with the spruce motif. Then assemble the two halves, each consisting of six assembled circles.

**6** Attach power tape along the spine on both halves. Press firmly.

**7** Before assembling the two halves, attach a piece of doubled-over cotton cord with a wooden bead (along the straight edge).
