Foam Clay op papier-maché

Foam Clay is een zelfhardend boetseermateriaal en is ideaal voor het bekleden van vormen van papier-maché

Roll small Foam Clay balls and press the soft modelling clay onto the papier-mâché surface. Press lightly and distribute with your finger tips. You need a surprisingly small amount to cover the entire item. remove making a thick layer, as the details in the surface of the papier-mâché product will disappear.

It's easy to make lines, patterns and writing by rolling thin sausages and small balls, sticking them on top of already covered surfaces onto which □ Foam Clay adheres easily.
