

Het universum van de robot

v11459

Dit zijn levensechte robotten gemaakt van kartonnen dozen, plastic potten, flexibel draad en geboetseerd met Silk Clay. Ze zijn gedecoreerd met Plus Color acrylverf en kralen.

Hoe werkt het

1.
Make a hole in two plastic tubs for the feet. Then make holes in the box for the arms and legs.

2.
Make the legs from flexible cord with self-hardening clay feet.

3.
Then attach the arms and the legs onto the body of the robot (the cardboard box) with a glue gun.

4.
Make the head and other loose parts in Silk Clay.

5.
Glue on the head using the glue gun.

6.
Paint the robot with Plus Color. Give it two coats to give it a great finish.

7.
Finally decorate the robot with beads and rings with a silver finish.

8.
The finished robot.

Robot variants
Of course you can make your own robot, just as you would like it.

11
Another Robot! ▯ The possibilities are endless.
