

Gestreepte kaarsen

v12562

Kaarsen met strepen zijn gemaakt door de kaarsenwas in de vorm te gieten die bevestigd zijn op de vormenhouder.

hoe werkt het

1.

Melt the candle wax in two melting pots; a different colour in each. Add a wick to each candle mould and attach the candle moulds to the candle mould holder. The mould must be perfectly vertical when pouring in the candle wax. Then arrange the forms at an angle in the candle mould holder and tighten the screw securely. The candle wax must solidify between each new colour. When adding the final amount of candle wax, make sure that the moulds are standing upright again.
