

Een geembost zakje gevouwen van papier

v12790

Gebruik de embossing platen en embossing hulpje op Color Bar papier. De structuur komt tevoorschijn als je met het schuursponsje licht wrijft. Het cadeauzakje wordt gevouwen van A4 papier.

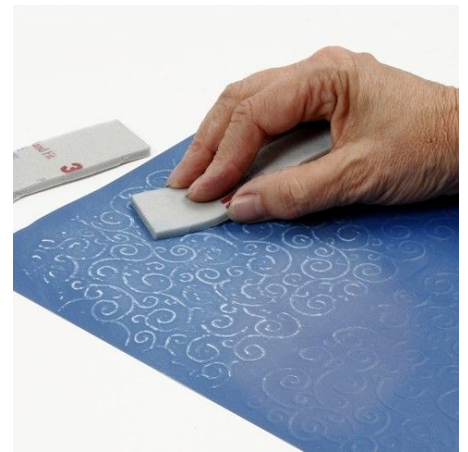

Hoe werkt het

1. Attach the texture plate to the ShapeBoss. Place the paper on top of the texture plate with the dark side facing down.

2. Use the texturing tool to make circle movements over the paper. Move the paper to make sure to emboss the entire piece of paper.

3. Now lightly sand the paper until the embossed pattern appears white (the paper core is white). Wipe the Color Bar paper with a piece of kitchen roll.

4. Fold the A4 piece of paper into a bag: First fold once lengthwise.

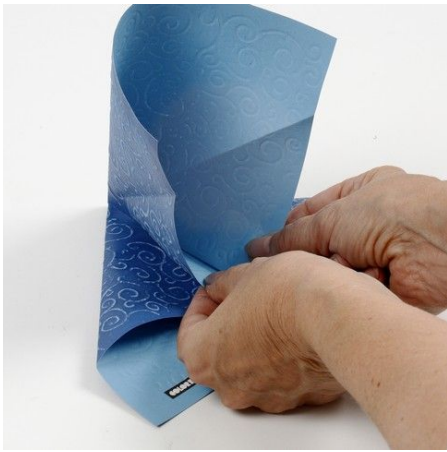

5. Unfold and fold the paper across.

6. Turn the paper so that the opening is facing towards you. Fold the top corners towards the middle and unfold them again.

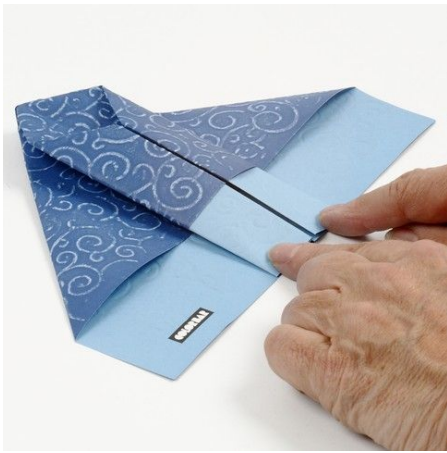

7. Now fold the sides towards the middle.

8. Push it down so it resembles a paper hat.

9. Fold the top sides towards the middle line.

10. ... and fold towards the middle line again. Turn the paper over and repeat on the reverse.

11. Fold down the flaps at the top at both sides.

12. Make a hole in both sides with revolving punch pliers.

13. Push the bottom up and accentuate all four sides.

14. Tie a piece of paper cord in the holes for closing the bag.
