

Kerstfiguren gemaakt van Silk Clay, wire en chenilledraad

v13673

De kerstkabouter, rendier en de trol zijn allemaal gemaakt van Silk Clay. Chenilledraad worden gebruikt als haar en gewei. Het wire/metaaldraad wordt gebruikt voor de benen.

hoe werkt het

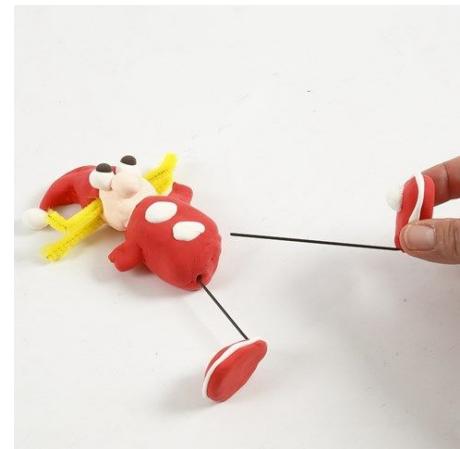

1.

Shape a torso, a head, arms and facial features etc. from different colors of Silk Clay. Push pieces of pipe cleaners into the Silk Clay head whilst the Silk Clay is still pliable. Leave the figure to dry for a while.

2.

Cut a stub wire in half in the middle and use the two pieces for legs. Shape feet at the ends using chain nose pliers. Cover the feet with Silk Clay for shoes. Adjust the legs and feet so that they balance and let the legs dry standing.

3.

Push each leg into the figure before it dries completely and find the balance point enabling the figure to stand on its own. Allow 24 hours for the complete figure to dry.

Another example

A reindeer with two and four legs respectively.
