

Dromenvanger van koord op metalen ring

v14719

Deze dromenvanger is gemaakt van een metalen ring en het web is gemaakt van katoenkoord. Aan de onderkant zijn veren en kralen gehangen.

Hoe werkt het

1
Wind the yarn tightly all the way around the metal ring. Tie the two ends together with a knot when they meet.

2
Divide the ring, for example, into eight equal sections and make a small ball of cotton yarn. Tie the yarn at each point and weave from one point to the next.

3
Another example

4
Continue round the ring and work towards the middle, one section to the next in the middle of each string of yarn – under and over respectively. Remember to tighten as you go along.

5
Another example

6
Pull the yarn up in the middle, tie a knot and trim. A TIP: You may put a blob of glue onto the knot to make sure that the yarn end is kept in place.

7

Pendants on the dream catcher: Cut three pieces of yarn and tie them at three points between two sections. Thread a bead onto each piece of yarn and finish with 2-3 knots. Trim the excess ends.

8

Decorate the pendants. Push a blob of glue inside each bead and attach a feather inside the bead. Leave to dry. Hanging: Cut a piece of cord, tie it onto the top of the ring and thread on a bead.
