

## A Cushion with Pom-poms for a Stool

v14803

This round cushion (for a stool) is made from pom-poms tied onto a non-slip PVC mesh. Each pom-pom is made from acrylic yarn on a pom-pom tool.

### *Hoe werkt het*

**1**  
Cut the mesh to fit the seat of the stool.

**2**  
Cut a piece of yarn to your chosen length and double it over. This is to be used for tying the pom-pom at the end. Place this doubled-over piece of yarn on the tool as illustrated. Now wind the yarn from the ball approx. 100 times around the widest of the two forks of the tool. (NB: this tool enables you to make pom-poms in two different sizes, dictated by the narrow or wide fork).

**3**  
Tie the doubled-over piece of yarn tightly around the wound bundle of wool.

**4**  
Cut the yarn open on one side of the tool. The tool has a deep groove all the way around to allow room for the blade of the scissors.

**5**  
Tighten the doubled-over piece of yarn again and cut the yarn open on the other side of the tool. Tighten one more time and finish with a couple of double knots.

**6**  
Trim the pom-pom to make it as round as possible. (Leave two of the long yarn ends for tying and cut off the other two yarn ends).

**7**  
Tie each pom-pom onto the mesh using the long yarn ends of the pom-poms.
